FH-25 FreeHand

2.5x power lighted magnifier with 5x Spot lens

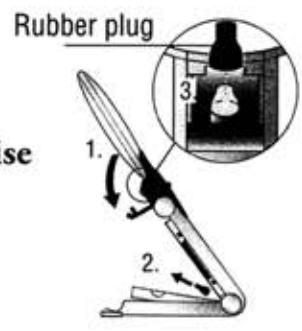
The FreeHand is a 2.5x power lighted magnifier that can be used as a hand-held magnifier or a free-standing magnifier for convenient hands-free viewing. Activate the build-in light at the flip of a switch for use in low-light conditions. Crystal-clear acrylic lens gives you a sharp distortion-free view, and a 5x high–power spot lens allows you to see the finest details with ease. Use 2 AA batteries (not included).

To Use Hands Free:
-Extend base stand by grabbing tabs and pulling out bottom portion of handle.
-Adjust magnifier head to desired viewing angle.
-Switch on light for use in low light conditions.

To Change Batteries:
-Pull open bottom portion of handle to expose battery compartment.
-Grab top of battery door from both sides and pull open.
-Replace exhausted batteries with 2 AA 1.5V batteries (please follow polarity indicators on inside of battery compartment).

Warning:
Do not leave batteries installed during extended periods of disuse. Do not mix new and old batteries. Do not mix alkaline, standard (carbon-zinc) or rechargeable (nickel-cadium) batteries.

To Change Light Bulb:
-Open the bulb cover.
-Remove the rubber plug (in the battery compartment next to the hinge) using a slim pointed object.
-Place the rubber plug on the light bulb and turn the bulb counter-clockwise to remove. Replace the bulb with a new SU03 2.5V bulb.



Important:
Touch the new light bulb only with a cloth, otherwise leftover oil residue might burn into the glass body and dull the lamp.
